

AGRIBETA

Nitrogen Organic Fertilizer - mixture of nitrogenous fluid fertilizers (5-0-0)

Packs : 1.2 - 5 - 10 - 25 Kg

COMPOSITION :

Organic carbon (C) of biological origin	15%
Total nitrogen (N) of vegetable origin	5%
Nitrogen (N) Organic	5%
Glycinebetaine	35%
Vegetable amino acids	5%

Components : nitrogenous fertilizer of vegetable origin and fluid borlanda

TECHNICAL FEATURES :

AGRIBETA is an organic fertilizer of vegetable origin with organic substance and levorotatory amino acids, the only truly usable and absorbable form for plants. AGRIBETA contains glycinbetaine, which gives anti-stress properties, a molecule that is normally produced by the plant in response to normal environmental stresses such as: high and low temperatures, soil salinity and drought. AGRIBETA contains declared substances called "substances with organic properties" that go to improve the structural characteristics of the soil. The left-handed amino acid fraction more stimulates the production of the root hairs, the part that performs the function of absorption. AGRIBETA increases the formation of new roots and consequently amplifies the absorption of the elements that are combined in it; this will turn into an increase in production both in qualitative and quantitative terms. AGRIBETA is particularly indicated on vegetable and fruit crops.

PHYSICAL CHARACTERISTICS:

pH of the 1% solution: 7.1

Specific weight: 1.12

METHODS AND DOSES OF USE :

LEAF APPLICATION

All crops:	Every 10-15 days	5-6 Kg/ha
------------	------------------	-----------

RADICAL APPLICATION

All crops:	Every 10-15 days	10-15 Kg/ha
------------	------------------	-------------
